Explore Agriculture Beyond the U.S. — Summer 2027 in Colombia

Interested in agriculture, food, sustainability, or the environment? Join our UC Davis Summer Abroad program, **Agriculture and the Environment in Colombia**.

Based at the Alliance of Bioversity International and CIAT, you'll learn directly from scientists, farmers, and local hosts. Planned experiences include visiting crop research programs and laboratories, exploring cacao and chocolate processing, learning about regenerative farming, and traveling through Colombia's coffee region.

You'll connect classroom discussions to real agricultural challenges and develop a guided project aligned with your interests. Along the way, you can broaden your view of agriculture, build international connections, and explore career possibilities in research, sustainability, and agricultural development.

Students from a range of majors are welcome. No Spanish or previous study abroad experience is required.

Financial aid may apply, and scholarships are available. Explore the Global Learning Hub's funding resources: https://globallearning.ucdavis.edu/resources/funding/studyabroad
